Woodworking Order Management System

INFO-C 451

Product Brochure

Overview:

This Woodworking Order Management System is designed to help a small custom woodworking business keep track of customer orders in a more organized way. Instead of using paper notes, memory, or scattered files, the system gives the business one place to enter customer information, project details, payment amounts, due dates, and order statuses. This makes the order tracking process easier and helps reduce mistakes with payments, deadlines, and project progress.

Key Features:

- Simple user interface: Easy to use order form and saved orders table.
- Efficient and simple reservation system: Users can enter customer information and woodworking project details.
- Payment Tracking: The system records estimated cost, amount paid and calculates the remaining balance.
- Order Status Updates: Users can update orders as requested, approved, in progress, completed, or delivered.
- Saved Order List: Orders are displayed in a table so users can quickly review current projects.
- Delete Option: Orders can be removed if they are entered by mistake or are no longer needed.
- Basic Error Handling: The system checks for missing fields, and incorrect payment amounts before saving data.

Why Choose Our System?

- Timesaving: Customer orders can be entered and viewed quickly.
- Simple: The system is easy to understand and doesn't require higher technical knowledge.
- Organized: Customer information, project details, payment information, and order status are kept in one place.
- Reliable: Basic validation helps prevent missing information and payment tracking mistakes.
- Useful for Small Businesses: Designed for a small woodworking shop that needs a practical order tracking system.

Technologies Used:

- Frontend: HTML, CSS, JavaScript.
- Storage: Browser localStorage
- Editor: Notepad++
- Database: Separate database is NOT required for this version of the system.

User Benefits:

- The business can manage customer orders in one place.
- The users can quickly see current projects, due dates, balances, and statuses.
- Payment balances are calculated automatically.
- Orders can be updated as projects move through the process.
- The system helps replace a manual tracking process with a cleaner digital process.

Snapshots From Website:

Main System Screen:

The screenshot shows a web browser window with the title "Woodworking Order Management System". The address bar shows the file path "C:/Users/jdver/OneDrive/Documents/INFO-C451/Final_Project/WoodWorking_Order_System/1_Code/index.html". The page has a dark brown header with the title "Woodworking Order Management System" and the subtitle "Manage customer orders, payments, and project status in one place." Below the header is a light beige background. In the center, there is a white box titled "Add New Order" with a "Save Order" button at the bottom. The form contains the following fields:

Field Label	Field Type/Value
Customer Name	
Phone Number	
Email	
Project Type	Table, cabinet, cutting board, etc.
Project Description	
Estimated Cost	
Amount Paid	
Due Date	mm / dd / yyyy
Order Status	Select Status

Saved Orders Table:

Saved Orders

Customer	Project	Due Date	Status	Balance Due	Actions
Justin Verrick	Dining Table	2026-06-01	In Progress ▾	\$1500.00	<button>Delete</button>
John Doe	Bookshelf	2026-05-03	Completed ▾	\$0.00	<button>Delete</button>
Amanda Smith	Cutting Board & Coaster set	2026-06-02	Requested ▾	\$250.00	<button>Delete</button>

Order Summary:

Order Summary

Total Orders: 3

Total Balance Due: \$1750.00

Error Message for Missing Fields:

Order Status

Please fill in all required fields before saving the order.
